## Contents

### Editorials

- 73 Evidence-based nursing in times of uncertainty

- 75 Inclusivity in nurse education

### Research made simple

- 77 What is Q methodology?

### Evidence for nurse education

- 79 Impact of virtual simulation on nursing students' learning outcomes: a systematic review

### Commentaries

#### Adult nursing

- 81 Adoption of a biopsychosocial approach to musculoskeletal pain faces barriers at the micro, meso and macro levels

- 82 Discussing life expectancy: incorporating evidence-based professional training and guidelines into clinical practice

#### Care of the older person

- 83 Spread of SARS-CoV-2 in nursing aged care settings

- 84 Analgesic medicines not administered to those with dementia in residential settings despite awareness of undertreatment of and susceptibility to severe pain

- 85 Social isolation: an attributing factor of increased frailty risk and mortality amongst advanced-age intensive care unit survivors

- 86 Identification of palliative care needs at the end of life for dementia patients can decrease acute hospital care needs and admissions

- 87 Learn, recognise and prevent adverse drug reactions/events in elderly hospitalised patients

- 88 There is no evidence to suggest that ET feeding improves survival in people with severe dementia

#### Child health

- 89 Quality of care in the delivery hospital contributes to racial disparities in outcomes for low-risk newborns

#### Nurse education

- 90 Coping strategies and resilience in students should be supported by nursing curricula

- 91 Education curricula should support the development of environmentally literate nurses

- 92 Collaboration between universities and nursing placement providers is essential to ensure the well-being of the future nursing workforce

## July 2022 Volume 25 Issue 3

### Learning disabilities

- 93 Qualitative study on the factors and role of residential staff that influence and effect the support provided to adults with intellectual disabilities regarding the expression of their sexuality

### Nursing issues

- 94 Burnout in nurses during the COVID-19 pandemic: the rising need for development of evidence-based risk assessment and supportive interventions

- 95 Comprehensive nursing assessment of physio-psychosocial factors associated with pain, anxiety and sleep problems and their interactions may improve nursing care

- 96 Understanding the wider impact of patient safety incidents

- 97 What are the barriers to nurses reporting incidents?

- 98 Predictors of nursing staff's mental health and the effect of social support on preventing the impact of workplace bullying on mental health

- 99 Staff burn-out has implications for organisational and patient outcomes: would an open culture of support with structures in place prevent burn-out?

- 100 Corona-phobia and work-life imbalance affected nurses' psychological well-being

- 101 Delay in cancer treatment is associated with increased mortality

### Mental health

- 102 Reliable and comprehensive assessment of post-traumatic stress disorder is required to provide population-based prevention and treatment of PTSD during the COVID-19 pandemic

- 103 Comprehensive and clinically useful: review of risk factors for suicidal behaviour in men

- 104 Supporting resilience and well-being in health and social care professionals during pandemics

### Health promotion and public health

- 105 Self-perceptions of e-cigarettes among adolescents: a health safety concern

### Women's health and midwifery

- 106 Population data suggest persistently high risk of pregnancy complications in women with chronic kidney disease

- 107 Cultural competency among healthcare providers is vital to ensure equitable and optimal maternity care for im/migrant and visible minority women

- 108 Transitioning to motherhood under COVID-19 lockdown—challenges and silver linings
